Questionnaire for IT Expert

PART 1: RESPONDENT'S PROFILE

Name: _____

Age: _____

Affiliated Institution: _____

Position/Designation: _____

PART 2: SOFTWARE QUALITY EVALUATION

Directions: Please evaluate the software quality of the "SandEE" based on the eight main characteristics of ISO 25010 Software Product Quality Standards. Choose on the appropriate box using the four-point scale with its corresponding verbal descriptions (4 as the highest and 1 as the lowest).

Functional Suitability - Represents the degree to which a product or system provides functions that meet stated and implied needs when used under specified conditions.

Questions	1 Poorly Functional	2 Moderately Functional	3 Functional	4 Very Functional
Functional completeness - Degree to which the set of functions covers all the specified tasks and user objectives.				
Functional correctness - Degree to which a product or system provides the correct results with the needed degree of precision.				
Functional appropriateness - Degree to which the functions facilitate the accomplishment of specified tasks and objectives.				

Performance Efficiency - represents the performance relative to the amount of resources used under stated conditions.

Questions	1 Poorly Efficient	2 Moderately Efficient	3 Efficient	4 Very Efficient
Time behaviour - Degree to which the response and processing times and throughput rates of a product or system, when performing its functions, meet requirements.				
Resource utilization - Degree to which the amounts and types of resources used by the system, when performing its functions, meet requirements.				
Capacity - Degree to which the maximum limits of the system parameter meet requirements.				

Compatibility - Degree to which the system or component can exchange information with other products, systems or components, and/or perform its required functions while sharing the same hardware or software environment.

Questions	1 Poorly Compatible	2 Moderately Compatible	3 Compatible	4 Very Compatible
Co-existence - Degree to which a system can perform its required functions efficiently while sharing a common environment and resources with other products, without detrimental impact on any other product.				
Interoperability - Degree to which two or more systems, products or components can exchange information and use the information that has been exchanged.				

Usability - Degree to which a product or system can be used by specified users to achieve specified goals with effectiveness, efficiency and satisfaction in a specified context of use.

Questions	1 Poorly Usable	2 Moderately Usable	3 Usable	4 Very Usable
Appropriateness recognizability - Degree to which users can recognize whether a system is appropriate for their needs.				
Learnability - Degree to which a system can be used by specified users to achieve specified goals of learning to use the system with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.				
Operability - Degree to which a system has attributes that make it easy to operate and control.				
User error protection - Degree to which a system protects users against making errors.				
User interface aesthetics - Degree to which a user interface enables pleasing and satisfying interaction for the user.				
Accessibility - Degree to which a system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.				

Reliability - Degree to which a system, product or component performs specified functions under specified conditions for a specified period of time.

Questions	1 Poorly Reliable	2 Moderately Reliable	3 Reliable	4 Very Reliable
Maturity - Degree to which a system or component meets needs for reliability under normal operation				
Availability - Degree to which a system or component is operational and accessible when required for use.				
Fault tolerance - Degree to which a system or component operates as intended despite the presence of hardware or software faults.				
Recoverability - Degree to which, in the event of an interruption or a failure or system can recover the data directly affected and re-establish the desired state of the system				

Security - Degree to which a product or system protects information and data so that persons or other products or systems have the degree of data access appropriate to their types and levels of authorization.

Questions	1 Poorly Secure	2 Moderately Secure	3 Secure	4 Very Secure
Confidentiality - Degree to which a system ensures that data are accessible only to those authorized to have access.				
Integrity - Degree to which a system component prevents unauthorized access to, or modification of, computer programs or data.				
Non-repudiation - Degree to which actions or events can be proven to have taken place so that the events or actions cannot be repudiated later.				
Accountability - Degree to which the actions of an entity can be traced uniquely to the entity.				
Authenticity - Degree to which the identity of a subject or resource can be proved to be the one claimed.				

Maintainability - This characteristic represents the degree of effectiveness and efficiency with which a product or system can be modified to improve it, correct it or adapt it to changes in environment, and in requirements.

Questions	1 Poorly Maintainable	2 Moderately Maintainable	3 Maintainable	4 Very Maintainable
Modularity - Degree to which a system or computer program is composed of discrete components such that a change to one component has minimal impact on other components.				
Reusability - Degree to which an asset can be used in more than one system, or in building other assets.				
Analysability - Degree of effectiveness and efficiency with which it is possible to assess the impact on a product or system of an intended change to one or more of its parts, or to diagnose a product for deficiencies or causes of failures, or to identify parts to be modified.				
Modifiability - Degree to which a product or system can be effectively and efficiently modified without introducing defects or degrading existing product quality.				
Testability - Degree of effectiveness and efficiency with which test criteria can be established for a system, product or component and tests can be performed to determine whether those criteria have been met.				

Portability - Degree of effectiveness and efficiency with which a system, product or component can be transferred from one hardware, software or other operational or usage environment to another.

Questions	1 Poorly Portable	2 Moderately Portable	3 Portable	4 Very Portable
Adaptability - Degree to which a product or system can effectively and efficiently be adapted for different or evolving hardware, software or other operational or usage environments.				
Installability - Degree of effectiveness and efficiency with which a product or system can be successfully installed and/or uninstalled in a specified environment.				
Replaceability - Degree to which a product can replace another specified software product for the same purpose in the same environment.				

PART 4: FEEDBACK AND SUGGESTIONS

Please provide further comments about your experience in using **SandEE**.

Kindly identify its strong point/s to be enhanced and its weak points that need to be addressed for improvements.

_____

_____

_____

_____

_____

Do you have any thoughts on other Features/Functions that can be added to **SandEE**? Kindly share any suggestions with us so we can better improve it.
