Dear Respondent,

Thank you very much for using **SandEE**. **SandEE** is an educational, multi-platform 2D open world survival crafting game that teaches Lua and Python to the ICT and STEM students of Yverdon de Pestallozi School Inc. in an immersive world where code directly affects the game, missions guide players and reward their progress.

In this regard, we would like to seek your cooperation by accomplishing this survey form to help us evaluate the quality and assess the level of acceptability of the application to you as our target user/partner. Your feedback will be used to further improve its features to serve you better. Rest assured that the data gathered through this survey will be treated with utmost confidentiality in accordance to the provisions of RA 10173 or the Data Privacy Act of 2012.

Again, thank you very much for being our partner on this endeavor.

Questionnaire for End User

PART 1: RESPONDENT'S PROFILE

Name: _____
Age: _____
Affiliated Institution: _____
Position/Designation: _____

PART 2: SOFTWARE QUALITY EVALUATION

A. Directions: Please evaluate the software quality of the "SandEE" based on the three characteristics of ISO 25010 Software Product Quality Standards for end user. Choose on the appropriate box using the four-point scale with its corresponding verbal descriptions (4 as the highest and 1 as the lowest).

Functional Suitability - Represents the degree to which a product or system provides functions that meet stated and implied needs when used under specified conditions.

Questions	1 Poorly Functional	2 Moderately Functional	3 Functional	4 Very Functional
Functional completeness - Degree to which the set of functions covers all the specified tasks and user objectives				
Functional correctness - Degree to which a product or system provides the correct results with the needed degree of precision.				
Functional appropriateness - Degree to which the functions facilitate the accomplishment of specified tasks and objectives.				

Performance Efficiency - represents the performance relative to the amount of resources used under stated conditions.

Questions	1 Poorly Efficient	2 Moderately Efficient	3 Efficient	4 Very Efficient
Time behaviour - Degree to which the response and processing times and throughput rates of a system, when performing its functions, meet requirements.				
Resource utilization - Degree to which the amounts and types of resources used by a system, when performing its functions, meet requirements.				
Capacity - Degree to which the maximum limits of a product or system parameter meet requirements.				

Usability - Degree to which a product or system can be used by specified users to achieve specified goals with effectiveness, efficiency and satisfaction in a specified context of use.

Questions	1 Poorly Usable	2 Moderately Usable	3 Usable	4 Very Usable
Appropriateness recognizability - Degree to which users can recognize whether a system is appropriate for their needs.				
Learnability - Degree to which a system can be used by specified users to achieve specified goals of learning to use the product or system with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.				
Operability - Degree to which a system has attributes that make it easy to operate and control.				
User error protection - Degree to which a system protects users against making errors.				
User interface aesthetics - Degree to which a user interface enables pleasing and satisfying interaction for the user.				

Questions	1 Poorly Usable	2 Moderately Usable	3 Usable	4 Very Usable
Accessibility - Degree to which a system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.				

PART 4: FEEDBACK AND SUGGESTIONS

Please provide further comments about your experience in using **SandEE**.

Kindly identify its strong point/s to be enhanced and its weak points that need to be addressed for improvements.

_____

_____

_____

_____

_____

Do you have any thoughts on other Features/Functions that can be added to **SandEE**? Kindly share any suggestions with us so we can better improve it.

PART 2: SOFTWARE QUALITY EVALUATION

Directions: Please evaluate the software quality of the "SandEE" based on the eight main characteristics of ISO 25010 Software Product Quality Standards. Choose on the appropriate box using the four-point scale with its corresponding verbal descriptions (4 as the highest and 1 as the lowest).

Functional Suitability - Represents the degree to which a product or system provides functions that meet stated and implied needs when used under specified conditions.

Questions	1 Poorly Functional	2 Moderately Functional	3 Functional	4 Very Functional
Functional completeness - Degree to which the set of functions covers all the specified tasks and user objectives.				
Functional correctness - Degree to which a product or system provides the correct results with the needed degree of precision.				
Functional appropriateness - Degree to which the functions facilitate the accomplishment of specified tasks and objectives.				

Performance Efficiency - represents the performance relative to the amount of resources used under stated conditions.

Questions	1 Poorly Efficient	2 Moderately Efficient	3 Efficient	4 Very Efficient
Time behaviour - Degree to which the response and processing times and throughput rates of a product or system, when performing its functions, meet requirements.				
Resource utilization - Degree to which the amounts and types of resources used by the system, when performing its functions, meet requirements.				
Capacity - Degree to which the maximum limits of the system parameter meet requirements.				

Compatibility - Degree to which the system or component can exchange information with other products, systems or components, and/or perform its required functions while sharing the same hardware or software environment.

Questions	1 Poorly Compatible	2 Moderately Compatible	3 Compatible	4 Very Compatible
Co-existence - Degree to which a system can perform its required functions efficiently while sharing a common environment and resources with other products, without detrimental impact on any other product.				
Interoperability - Degree to which two or more systems, products or components can exchange information and use the information that has been exchanged.				

Usability - Degree to which a product or system can be used by specified users to achieve specified goals with effectiveness, efficiency and satisfaction in a specified context of use.

Questions	1 Poorly Usable	2 Moderately Usable	3 Usable	4 Very Usable
Appropriateness recognizability - Degree to which users can recognize whether a system is appropriate for their needs.				
Learnability - Degree to which a system can be used by specified users to achieve specified goals of learning to use the system with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.				
Operability - Degree to which a system has attributes that make it easy to operate and control.				
User error protection - Degree to which a system protects users against making errors.				
User interface aesthetics - Degree to which a user interface enables pleasing and satisfying interaction for the user.				
Accessibility - Degree to which a system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.				

Reliability - Degree to which a system, product or component performs specified functions under specified conditions for a specified period of time.

Questions	1 Poorly Reliable	2 Moderately Reliable	3 Reliable	4 Very Reliable
Maturity - Degree to which a system or component meets needs for reliability under normal operation				
Availability - Degree to which a system or component is operational and accessible when required for use.				
Fault tolerance - Degree to which a system or component operates as intended despite the presence of hardware or software faults.				
Recoverability - Degree to which, in the event of an interruption or a failure or system can recover the data directly affected and re-establish the desired state of the system				

Security - Degree to which a product or system protects information and data so that persons or other products or systems have the degree of data access appropriate to their types and levels of authorization.

Questions	1 Poorly Secure	2 Moderately Secure	3 Secure	4 Very Secure
Confidentiality - Degree to which a system ensures that data are accessible only to those authorized to have access.				
Integrity - Degree to which a system component prevents unauthorized access to, or modification of, computer programs or data.				
Non-repudiation - Degree to which actions or events can be proven to have taken place so that the events or actions cannot be repudiated later.				
Accountability - Degree to which the actions of an entity can be traced uniquely to the entity.				
Authenticity - Degree to which the identity of a subject or resource can be proved to be the one claimed.				

Maintainability - This characteristic represents the degree of effectiveness and efficiency with which a product or system can be modified to improve it, correct it or adapt it to changes in environment, and in requirements.

Questions	1 Poorly Maintainable	2 Moderately Maintainable	3 Maintainable	4 Very Maintainable
Modularity - Degree to which a system or computer program is composed of discrete components such that a change to one component has minimal impact on other components.				
Reusability - Degree to which an asset can be used in more than one system, or in building other assets.				
Analysability - Degree of effectiveness and efficiency with which it is possible to assess the impact on a product or system of an intended change to one or more of its parts, or to diagnose a product for deficiencies or causes of failures, or to identify parts to be modified.				
Modifiability - Degree to which a product or system can be effectively and efficiently modified without introducing defects or degrading existing product quality.				
Testability - Degree of effectiveness and efficiency with which test criteria can be established for a system, product or component and tests can be performed to determine whether those criteria have been met.				

Portability - Degree of effectiveness and efficiency with which a system, product or component can be transferred from one hardware, software or other operational or usage environment to another.

Questions	1 Poorly Portable	2 Moderately Portable	3 Portable	4 Very Portable
Adaptability - Degree to which a product or system can effectively and efficiently be adapted for different or evolving hardware, software or other operational or usage environments.				
Installability - Degree of effectiveness and efficiency with which a product or system can be successfully installed and/or uninstalled in a specified environment.				
Replaceability - Degree to which a product can replace another specified software product for the same purpose in the same environment.				

PART 4: FEEDBACK AND SUGGESTIONS

Please provide further comments about your experience in using **SandEE**.

Kindly identify its strong point/s to be enhanced and its weak points that need to be addressed for improvements.
